PEST MANAGEMENT

West Chicago School District #33 practices Integrated Pest Management, a program that combines preventative techniques, Non-chemical pest control method, and the appropriate use of pesticides with a preference for products that are the least harmful to human health and the environment. Applications of pesticides are made only when deemed necessary to control a pest problem and after trying other means to control the problem. The term “pesticide” includes insecticides, herbicides, rodenticides, and fungicides.

We have a registry of parents who will be notified in the event of pesticide applications based on their permission selected. Please be advised, if there is an immediate threat to health or property that requires treatment before notification can be sent out, parents will receive notification as soon as possible.
